1. A botanist is studying the distribution of daisies in a field. The field is divided into a number of equal sized squares. The mean number of daisies per square is assumed to be 3. The daisies are distributed randomly throughout the field.

Find the probability that, in a randomly chosen square there will be

- (a) more than 2 daisies, (3)
- (b) either 5 or 6 daisies. (2)

The botanist decides to count the number of daisies,  $x$ , in each of 80 randomly selected squares within the field. The results are summarised below

$$\sum x = 295 \qquad \sum x^2 = 1386$$

- (c) Calculate the mean and the variance of the number of daisies per square for the 80 squares. Give your answers to 2 decimal places. (3)
- (d) Explain how the answers from part (c) support the choice of a Poisson distribution as a model. (1)
- (e) Using your mean from part (c), estimate the probability that exactly 4 daisies will be found in a randomly selected square. (2)

blank

(Total 9 marks)

**Q2**

Leave  
blank

4. The length of a telephone call made to a company is denoted by the continuous random variable  $T$ . It is modelled by the probability density function

$$f(t) = \begin{cases} kt & 0 \leq t \leq 10 \\ 0 & \text{otherwise} \end{cases}$$

- (a) Show that the value of  $k$  is  $\frac{1}{50}$ . (3)
  - (b) Find  $P(T > 6)$ . (2)
  - (c) Calculate an exact value for  $E(T)$  and for  $\text{Var}(T)$ . (5)
  - (d) Write down the mode of the distribution of  $T$ . (1)
- It is suggested that the probability density function,  $f(t)$ , is not a good model for  $T$ .
- (e) Sketch the graph of a more suitable probability density function for  $T$ . (1)

6. A web server is visited on weekdays, at a rate of 7 visits per minute. In a random one minute on a Saturday the web server is visited 10 times.

- (a) (i) Test, at the 10% level of significance, whether or not there is evidence that the rate of visits is greater on a Saturday than on weekdays. State your hypotheses clearly.
- (ii) State the minimum number of visits required to obtain a significant result. **(7)**

(b) State an assumption that has been made about the visits to the server. **(1)**

In a random two minute period on a Saturday the web server is visited 20 times.

- (c) Using a suitable approximation, test at the 10% level of significance, whether or not the rate of visits is greater on a Saturday. **(6)**

7. A random variable  $X$  has probability density function given by

$$f(x) = \begin{cases} -\frac{2}{9}x + \frac{8}{9} & 1 \leq x \leq 4 \\ 0 & \text{otherwise} \end{cases}$$

(a) Show that the cumulative distribution function  $F(x)$  can be written in the form  $ax^2 + bx + c$ , for  $1 \leq x \leq 4$  where  $a, b$  and  $c$  are constants. **(3)**

(b) Define fully the cumulative distribution function  $F(x)$ . **(2)**

(c) Show that the upper quartile of  $X$  is 2.5 and find the lower quartile. **(6)**

Given that the median of  $X$  is 1.88

(d) describe the skewness of the distribution. Give a reason for your answer. **(2)**
