Summer 2016

Pearson Edexcel GCE in Core Mathematics 1 (6663/01)

#### **Edexcel and BTEC Qualifications**

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at <u>www.edexcel.com</u> or <u>www.btec.co.uk</u>. Alternatively, you can get in touch with us using the details on our contact us page at <u>www.edexcel.com/contactus</u>.

#### Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: <u>www.pearson.com/uk</u>

Summer 2016 Publications Code 6663\_01\_1606\_MS All the material in this publication is copyright © Pearson Education Ltd 2016

#### General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

#### PEARSON EDEXCEL GCE MATHEMATICS

#### **General Instructions for Marking**

- 1. The total number of marks for the paper is 75
- 2. The Edexcel Mathematics mark schemes use the following types of marks:
- **M** marks: Method marks are awarded for 'knowing a method and attempting to apply it', unless otherwise indicated.
- A marks: Accuracy marks can only be awarded if the relevant method (M) marks have been earned.
- **B** marks are unconditional accuracy marks (independent of M marks)
- Marks should not be subdivided.
- 3. Abbreviations

These are some of the traditional marking abbreviations that will appear in the mark schemes.

- bod benefit of doubt
- ft follow through
- the symbol  $\sqrt{}$  will be used for correct ft
- cao correct answer only
- cso correct solution only. There must be no errors in this part of the question to obtain this mark
- isw ignore subsequent working
- awrt answers which round to
- SC: special case
- oe or equivalent (and appropriate)
- d... or dep dependent
- indep independent
- dp decimal places
- sf significant figures
- **\*** The answer is printed on the paper or ag- answer given
- \_ or d... The second mark is dependent on gaining the first mark
- 4. All A marks are 'correct answer only' (cao.), unless shown, for example, as A1 ft to indicate that previous wrong working is to be followed through. After a misread however, the subsequent A marks affected are treated as A ft.
- 5. For misreading which does not alter the character of a question or materially simplify it, deduct two from any A or B marks gained, in that part of the question affected.

- 6. If a candidate makes more than one attempt at any question:
  - If all but one attempt is crossed out, mark the attempt which is NOT crossed out.
  - If either all attempts are crossed out or none are crossed out, mark all the attempts and score the highest single attempt.
- 7. Ignore wrong working or incorrect statements following a correct answer.

## **General Principles for Core Mathematics Marking**

(But note that specific mark schemes may sometimes override these general principles).

## Method mark for solving 3 term quadratic:

## 1. Factorisation

$$(x^2 + bx + c) = (x + p)(x + q)$$
, where  $|pq| = |c|$ , leading to  $x = \dots$ 

 $(ax^2+bx+c) = (mx+p)(nx+q)$ , where pq = |c| and |mn| = |a|, leading to x = ...

## 2. Formula

Attempt to use the correct formula (with values for a, b and c).

## 3. Completing the square

Solving 
$$x^2 + bx + c = 0$$
:  $\left(x \pm \frac{b}{2}\right)^2 \pm q \pm c = 0$ ,  $q \neq 0$ , leading to  $x = \dots$ 

#### Method marks for differentiation and integration:

#### 1. Differentiation

Power of at least one term decreased by 1. ( $x^n \rightarrow x^{n-1}$ )

## 2. Integration

Power of at least one term increased by 1. ( $x^n \rightarrow x^{n+1}$ )

## Use of a formula

Where a method involves using a formula that has been learnt, the advice given in recent examiners' reports is that the formula should be quoted first.

Normal marking procedure is as follows:

<u>Method mark</u> for quoting a correct formula and attempting to use it, even if there are small errors in the substitution of values.

Where the formula is <u>not</u> quoted, the method mark can be gained by implication from <u>correct</u> working with values, but may be lost if there is any mistake in the working.

### Exact answers

Examiners' reports have emphasised that where, for example, an exact answer is asked for, or working with surds is clearly required, marks will normally be lost if the candidate resorts to using rounded decimals.

Question Number	Scheme Notes			
1		$\int (2x^4 - \frac{4}{\sqrt{x}} + 3) \mathrm{d}x$		
	$\frac{2}{5}x^5 - \frac{4}{\frac{1}{2}}x^{\frac{1}{2}} + 3x$	M1: $x^n \to x^{n+1}$ . One power increased by 1 but not for just + c. This could be for $3 \to 3x$ or for $x^n \to x^{n+1}$ on what they think $\frac{1}{\sqrt{x}}$ is as a power of x. A1: One of these 3 terms correct. Allow un-simplified e.g. $\frac{2x^{4+1}}{4+1}$ , $-\frac{4x^{-\frac{1}{2}+1}}{-\frac{1}{2}+1}$ , $3x^1$	M1A1A1	
		A1: Two of these 3 terms correct. Allow un-simplified e.g. $\frac{2x^{4+1}}{4+1}$ , $-\frac{4x^{-\frac{1}{2}+1}}{-\frac{1}{2}+1}$ , $3x^1$		
	$=\frac{2}{5}x^5 - 8x^{\frac{1}{2}} + 3x + c$	Complete fully correct simplified expression appearing allon one line with constant.Allow 0.4 for $\frac{2}{5}$ .Do not allow $3x^1$ for $3x$ Allow $\sqrt{x}$ or $x^{0.5}$ for $x^{\frac{1}{2}}$	Al	
	Ignore any spurious inte	gral signs and ignore subsequent working following a fully		
		correct answer.	E 4 3	
			[4] 4 marks	

Question Number	Scheme	Notes	Marks		
2	$9^{3x+1} = \text{ for example}$ $3^{2(3x+1)} \text{ or } (3^2)^{3x+1} \text{ or } (3^{(3x+1)})^2 \text{ or } 3^{3x+1} \times 3^{3x+1}$ $\text{ or } (3\times3)^{3x+1} \text{ or } 3^2 \times (3^2)^{3x} \text{ or } (9^{\frac{1}{2}})^y \text{ or } 9^{\frac{1}{2}y}$	Expresses $9^{3x+1}$ correctly as a power of 3 or expresses $3^y$ correctly as a power of 9 or expresses <i>y</i> correctly in terms of <i>x</i>	M1		
	or $y = 2(3x+1)$	(This mark is <u>not</u> for just $3^2 = 9$ )			
	= $3^{6x+2}$ or $y = 6x + 2$ or $a = 6, b = 2$	Cao (isw if necessary)	A1		
	Providing there is no incorrect work, allow sight of $6x + 2$ to score both marks				
	Correct answer only implies both marks				
	Special case: $3^{6x+1}$ only scores M1A0				
			[2]		
	Alternative u	ising logs			
	$9^{3x+1} = 3^{y} \Longrightarrow \log 9^{3x+1} = \log 3^{y}$				
	$(3x+1)\log 9 = y\log 3$	Use power law correctly on both sides	M1		
	$y = \frac{\log 9}{\log 3} (3x+1)$				
	y = 6x + 2	cao	A1		
			2 marks		

Question	Scheme	Notes	Ma	rks
Number 3.(a)		$\sqrt{50} = 5\sqrt{2}$ or $\sqrt{18} = 3\sqrt{2}$ and the other term		
5.(u)	$\sqrt{50} - \sqrt{18} = 5\sqrt{2} - 3\sqrt{2}$	in the form $k\sqrt{2}$ . This mark may be implied by the correct answer $2\sqrt{2}$	M1	
-	$= 2\sqrt{2}$	Or $a = 2$	A1	
				[2]
(b) WAY 1	$\frac{12\sqrt{3}}{\sqrt{50} - \sqrt{18}} = \frac{12\sqrt{3}}{"2"\sqrt{2}}$	Uses part (a) by replacing denominator by their $a\sqrt{2}$ where <i>a</i> is numeric. This is all that is required for this mark.	M1	
	$=\frac{12\sqrt{3}}{"2"\sqrt{2}}\times\frac{\sqrt{2}}{\sqrt{2}}=\frac{12\sqrt{6}}{4}$	Rationalises the denominator by a correct method e.g. multiplies numerator and denominator by $k\sqrt{2}$ to obtain a multiple of $\sqrt{6}$ . Note that multiplying numerator and denominator by $2\sqrt{2}$ or $-2\sqrt{2}$ is quite common and is acceptable for this mark. May be implied by a correct answer. <b>This is dependent on the first M1.</b>	dM1	
	$= 3\sqrt{6}$ or $b = 3, c = 6$	Cao and cso	A1	
				[3]
(b) WAY 2	$\frac{12\sqrt{3}}{\sqrt{50} - \sqrt{18}} \times \frac{\sqrt{50} + \sqrt{18}}{\sqrt{50} + \sqrt{18}}$ or $\frac{12\sqrt{3}}{5\sqrt{2} - 3\sqrt{2}} \times \frac{5\sqrt{2} + 3\sqrt{2}}{5\sqrt{2} + 3\sqrt{2}}$	For rationalising the denominator by a correct method i.e. multiplying numerator and denominator by $k\left(\sqrt{50} + \sqrt{18}\right)$	M1	
	$\frac{60\sqrt{6}+36\sqrt{6}}{50-18}$	For replacing numerator by $\alpha \sqrt{6} + \beta \sqrt{6}$ . This is dependent on the first M1 and there is no need to consider the denominator for this mark.	dM1	
	$= 3\sqrt{6}$ or $b = 3, c = 6$	Cao and cso	A1	
				[3]
(b) WAY 3	$\frac{12\sqrt{3}}{\sqrt{50} - \sqrt{18}} = \frac{12\sqrt{3}}{"2"\sqrt{2}}$	Uses part (a) by replacing denominator by their $a\sqrt{2}$ where <i>a</i> is numeric. This is all that is required for this mark.	M1	
	$=\frac{12\sqrt{3}}{2\sqrt{2}}=\frac{6\sqrt{3}}{\sqrt{2}}=\frac{\sqrt{108}}{\sqrt{2}}=\sqrt{54}=\sqrt{9}\sqrt{6}$	Cancels to obtain a multiple of $\sqrt{6}$ . This is dependent on the first M1.	dM1	
	$= 3\sqrt{6}$ Or $b = 3, c = 6$	Cao and cso	A1	
(b)		Uses port (a) by replacing denominator by their		[3]
(b) WAY 4	$\frac{12\sqrt{3}}{\sqrt{50} - \sqrt{18}} = \frac{12\sqrt{3}}{"2"\sqrt{2}}$	Uses part (a) by replacing denominator by their $a\sqrt{2}$ where <i>a</i> is numeric. This is all that is required for this mark.	M1	
	$\left(\frac{12\sqrt{3}}{"2"\sqrt{2}}\right)^2 = \frac{432}{8}$			
	$\sqrt{54} = \sqrt{9}\sqrt{6}$	Obtains a multiple of $\sqrt{6}$ . This is dependent on the first M1.	dM1	
	$= 3\sqrt{6}$ Or $b = 3, c = 6$	Cao and cso (do not allow $\pm 3\sqrt{6}$ )	A1	
			5 ma	arks

-----------------------------

Question Number	Scheme	Notes	Marks
	Note original points are.		
4.(a)	(-2, 12)	Similar shape to given figure passing through the origin. A cubic shape with a maximum in the second quadrant and a minimum in the $4^{th}$ quadrant. There must be evidence of a change in at least one of the y-coordinates (inconsistent changes in the y-coordinates are acceptable) but <b>not the </b> <i>x</i> <b>-</b> <b>coordinates</b> .	B1
	(3, -24)	Maximum at $(-2, 12)$ and minimum at $(3, -24)$ with coordinates written the right way round. Condone missing brackets. The coordinates may appear on the sketch, or separately in the text (not necessarily referenced as <i>A</i> and <i>B</i> ). If they are on the sketch, the <i>x</i> and <i>y</i> coordinates can be positioned correctly on the axes rather than given as coordinate pairs. In cases of ambiguity, the sketch has precedence. The origin does not need to be labelled. Nor do the <i>x</i> and <i>y</i> axes.	B1
			[2]
(b)	Ť	A positive cubic which does not pass through the origin with a maximum to the left of the y-axis and a minimum to the right of the y-axis.	M1
	(-2, 0)	Maximum at $(-2, 0)$ and minimum at $(3, -12)$ . Condone missing brackets. For the max allow just -2 or $(0, -2)$ if marked in the correct place. If the coordinates are in the text, they must appear as $(-2, 0)$ and must not contradict the sketch. The curve must <b>touch</b> the <i>x</i> -axis at $(-2, 0)$ . For the min allow coordinates as shown or 3 and -12 to be marked in the correct places on the axes. In cases of ambiguity, the sketch has precedence.	Al
	(3, -12)	Crosses y-axis at $(0, -4)$ . Allow just -4 (not +4) and allow (-4, 0) if marked in the correct place. If the coordinates are in the text, they must appear as $(0, -4)$ and must not contradict the sketch. In cases of ambiguity, the sketch has precedence.	Al

7.	$y = 3x^2 + 6x^2$	$\frac{1}{3} + \frac{2x^3 - 7}{3\sqrt{x}}$	
	$\frac{2x^3 - 7}{3\sqrt{x}} = \frac{2x^3}{3\sqrt{x}} - \frac{7}{3\sqrt{x}} = \frac{2}{3}x^{\frac{5}{2}} - \frac{7}{3}x^{-\frac{1}{2}}$	Attempts to split the fraction into 2 terms and obtains either $\alpha x^{\frac{5}{2}}$ or $\beta x^{-\frac{1}{2}}$ . This may be implied by a correct power of x in their differentiation of one of these terms. But beware of $\beta x^{-\frac{1}{2}}$ coming from $\frac{2x^3 - 7}{3\sqrt{x}} = 2x^3 - 7 + 3x^{-\frac{1}{2}}$	M1
	$x^n  ightarrow x^{n-1}$	Differentiates by reducing power by one for any of their powers of $x$	M1
		A1: 6x. Do not accept $6x^1$ . Depends on second M mark only. Award when first seen and isw.	
		A1: $2x^{-\frac{2}{3}}$ . Must be simplified so do not	
	$\left(\frac{\mathrm{d}y}{\mathrm{d}x}\right) = 6x + 2x^{-\frac{2}{3}} + \frac{5}{3}x^{\frac{3}{2}} + \frac{7}{6}x^{-\frac{3}{2}}$	accept e.g. $\frac{2}{1}x^{-\frac{2}{3}}$ but allow $\frac{2}{\sqrt[3]{x^2}}$ . Depends on second M mark only. Award when first seen and isw.	
		A1: $\frac{5}{3}x^{\frac{3}{2}}$ . Must be simplified but allow e.g.	A1A1A1A1
		$1\frac{2}{3}x^{1.5}$ or e.g. $\frac{5}{3}\sqrt{x^3}$ . Award when first seen and isw.	
		A1: $\frac{7}{6}x^{-\frac{3}{2}}$ . Must be simplified but allow e.g.	
		$1\frac{1}{6}x^{-1\frac{1}{2}}$ or e.g. $\frac{7}{6\sqrt{x^3}}$ . Award when first seen and isw.	
	In an otherwise <u>fully correct solution</u> , penalis	e the presence of + c by deducting the final	
	Al		[6]
	Use of Quotient Rule: First M1 and f	inal A1A1 (Other marks as above)	.~]
	$\frac{d\left(\frac{2x^{3}-7}{3\sqrt{x}}\right)}{dx} = \frac{3\sqrt{x}\left(6x^{2}\right) - \left(2x^{3}-7\right)\frac{3}{2}x^{-\frac{1}{2}}}{\left(3\sqrt{x}\right)^{2}}$	Uses <u>correct</u> quotient rule	M1
	$=\frac{10x^{\frac{1}{2}}+7x^{-\frac{1}{2}}}{6x}$	A1: Correct first term of numerator and correct denominator A1: All correct as simplified as shown	A1A1
	So $\frac{dy}{dx} = 6x + 2x^{-\frac{2}{3}} + \frac{10x^{\frac{5}{2}}}{10x^{\frac{5}{2}}}$	$\frac{+7x^{-\frac{1}{2}}}{6}$ scores full marks	
	d <i>x</i>		6 marks

		-	8 marks		
	Allow working in terms of $x$ in (b) but the an	swer must be in terms of <i>p</i> for the final A mark.	[4]		
		$\frac{1}{2} > p > 4\frac{1}{2}$ scores M0A0			
		$p > \frac{1}{2}, p < 4\frac{1}{2}$ scores M1A0			
	Allow equivalent values e.g. $\frac{36}{8}$ for $4\frac{1}{2}$	allow $p > \frac{1}{2}$ and $p < 4\frac{1}{2}$ and $4\frac{1}{2} > p > \frac{1}{2}$ but	1411/11		
		A1: Allow $p \in (\frac{1}{2}, 4\frac{1}{2})$ or just $(\frac{1}{2}, 4\frac{1}{2})$ and	M1A1

$54\frac{1}{3}$	Any exact equivalent e.g. $\frac{163}{3}, \frac{326}{6}, 54.3$	A1

WA	Y 8	
$\frac{1}{2} \begin{vmatrix} 0 & \frac{44}{3} & 3 & 0 & 0 \\ 0 & 0 & 7 & 2 & 0 \end{vmatrix}$	M1: Uses the vertices of the quadrilateral to form a determinant $\begin{vmatrix} 0 & \frac{44}{3} & 3 & 0 & 0 \\ 0 & 0 & 7 & 2 & 0 \end{vmatrix}$ A1ft: $\frac{1}{2} \begin{vmatrix} 0 & \frac{44}{3} & 3 & 0 & 0 \\ 0 & 0 & 7 & 2 & 0 \end{vmatrix}$	M1A1ft
$\frac{1}{2}\left(\frac{44}{3}\times7+3\times2\right)$	dM1: Fully correct determinant method with no errors A1: Fully Correct numerical expression for the area <i>ORQP</i>	dM1A1
54 <u>1</u>	Any exact equivalent e.g. $\frac{163}{3}$ , $\frac{326}{6}$ , 54.3	Al

There will be other ways but the same approach to marking should be applied.

Question Number	Scheme		Marks
11. (a)	$y = 2x^3 + kx^2$	$x^{2}+5x+6$	
	$\left(\frac{\mathrm{d}y}{\mathrm{d}x}\right) = 6x^2 + 2kx + 5$	M1: $x^n \rightarrow x^{n-1}$ for one of the terms including $6 \rightarrow 0$ A1: Correct derivative	M1 A1
		1	[2]
(b)	Gradient of given line is $\frac{17}{2}$	Uses or states $\frac{17}{2}$ or equivalent e.g. 8.5. Must be stated or used in (b) and not just seen as part of $y = \frac{17}{2}x + \frac{1}{2}$ .	B1
	$\left(\frac{\mathrm{d}y}{\mathrm{d}x}\right)_{x=-2} = 6\left(-2\right)^2 + 2k\left(-2\right) + 5$	Substitutes $x = -2$ into their derivative ( <b>not the curve</b> )	M1
	$"24 - 4k + 5" = "\frac{17}{2}" \Longrightarrow k = \frac{41}{8}$	dM1: Puts their expression = their $\frac{17}{2}$ (Allow BOD for 17 or -17 but <b>not</b> the normal gradient) and solves to obtain a value for <i>k</i> . <b>Dependent on the previous</b> <b>method mark</b> . A1: $\frac{41}{8}$ or $5\frac{1}{8}$ or 5.125	dM1 A1
	Note	<u>e:</u>	
	$6x^2 + 2kx + 5 = \frac{17}{2}x + \frac{1}{2}$ scores no marks on its substitute $x = -2$ into the lhs. If they rearrange this	equation and then substitute $x = -2$ , this scores	
	no mai	rks.	[4]
(c)	$y = -16 + 4k - 10 + 6 = 4"k" - 20 = \frac{1}{2}$	M1: Substitutes $x = -2$ and their numerical k into $y =$ A1: $y = \frac{1}{2}$	M1 A1
	Allow the marks for part (c	) to be scored in part (b).	
( <b>d</b> )	$y - "\frac{1}{2}" = "\frac{17}{2}" (x - 2) \Longrightarrow -17x + 2y - 35 = 0$ or $y = "\frac{17}{2}" x + c \Longrightarrow c = \Longrightarrow -17x + 2y - 35 = 0$	M1: Correct attempt at linear equation with their 8.5 gradient (not the normal gradient) using $x = -2$ and their $\frac{1}{2}$	[2]
	$0r 2y - 17x = 1 + 34 \implies -17x + 2y - 35 = 0$	A1: cao (allow any integer multiple)
