January 2017

Pearson Edexcel International A Level in Mechanics 2 (WME02/01)

Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at <u>www.edexcel.com</u> or <u>www.btec.co.uk</u>. Alternatively, you can touch with us usina the details contact page aet in on our us at www.edexcel.com/contactus.

Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

General Marking Guidance

• All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.

• Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.

• Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.

• There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.

• All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.

• Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.

• When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.

• Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

PEARSON EDEXCEL IAL MATHEMATICS

General Instructions for Marking

- 1. The total number of marks for the paper is 75.
- 2. The Edexcel Mathematics mark schemes use the following types of marks:

<u>'M' marks</u>

These are marks given for a correct method or an attempt at a correct method. In Mechanics they are usually awarded for the application of some mechanical principle to produce an equation.

e.g. resolving in a particular direction, taking moments about a point, applying a suvat equation, applying the conservation of momentum principle etc. The following criteria are usually applied to the equation.

To earn the M mark, the equation

(i) should have the correct number of terms

(ii) be dimensionally correct i.e. all the terms need to be dimensionally correct e.g. in a moments equation, every term must be a 'force x distance' term or 'mass x distance', if we allow them to cancel 'g' s.

For a resolution, all terms that need to be resolved (multiplied by sin or cos) must be resolved to earn the M mark.

M marks are sometimes dependent (DM) on previous M marks having been earned. e.g. when two simultaneous equations have been set up by, for example, resolving in two directions and there is then an M mark for solving the equations to find a particular quantity – this M mark is often dependent on the two previous M marks having been earned.

<u>'A' marks</u>

These are dependent accuracy (or sometimes answer) marks and can only be awarded if the previous M mark has been earned. E.g. MO A1 is impossible.

<u>'B' marks</u>

These are independent accuracy marks where there is no method (e.g. often given for a comment or for a graph)

A few of the A and B marks may be f.t. – follow through – marks.

3. General Abbreviations

These are some of the traditional marking abbreviations that will appear in the mark schemes.

- bod benefit of doubt
- ft follow through
- the symbol $\sqrt{}$ will be used for correct ft
- cao correct answer only
- cso correct solution only. There must be no errors in this part of the question to obtain this mark
- isw ignore subsequent working
- awrt answers which round to
- SC: special case
- oe or equivalent (and appropriate)
- dep dependent
- indep independent
- dp decimal places
- sf significant figures
- * The answer is printed on the paper
- The second mark is dependent on gaining the first mark
- 4. All A marks are 'correct answer only' (cao.), unless shown, for example, as A1 ft to indicate that previous wrong working is to be followed through. After a misread however, the subsequent A marks affected are treated as A ft, but manifestly absurd answers should never be awarded A marks.
- 5. For misreading which does not alter the character of a question or materially simplify it, deduct two from any A or B marks gained, in that part of the question affected.
- 6. If a candidate makes more than one attempt at any question:
 - If all but one attempt is crossed out, mark the attempt which is NOT crossed out.
 - If either all attempts are crossed out or none are crossed out, mark all the attempts and score the highest single attempt.
- 7. Ignore wrong working or incorrect statements following a correct answer.

General Principles for Mechanics Marking

(But note that specific mark schemes may sometimes override these general principles)

- Rules for M marks: correct no. of terms; dimensionally correct; all terms that need resolving (i.e. multiplied by cos or sin) are resolved.
- Omission or extra g in a resolution is an accuracy error not method error.
- Omission of mass from a resolution is a method error.
- Omission of a length from a moments equation is a method error.
- Omission of units or incorrect units is not (usually) counted as an accuracy error.
- DM indicates a dependent method mark i.e. one that can only be awarded if a previous specified method mark has been awarded.
- Any numerical answer which comes from use of g = 9.8 should be given to 2 or 3 SF.
- Use of g = 9.81 should be penalised once per (complete) question.

N.B. Over-accuracy or under-accuracy of correct answers should only be penalised *once* per complete question. However, premature approximation should be penalised every time it occurs.

- Marks must be entered in the same order as they appear on the mark scheme.
- In all cases, if the candidate clearly labels their working under a particular part of a question i.e. (a) or (b) or (c),.....then that working can only score marks for that part of the question.
- Accept column vectors in all cases.
- Misreads if a misread does not alter the character of a question or materially simplify it, deduct two from any A or B marks gained, bearing in mind that after a misread, the subsequent A marks affected are treated as A ft
- Mechanics Abbreviations
 - M(A) Taking moments about A.
 - N2L Newton's Second Law (Equation of Motion)
 - NEL Newton's Experimental Law (Newton's Law of Impact)
 - HL Hooke's Law
 - SHM Simple harmonic motion
 - PCLM Principle of conservation of linear momentum
 - RHS, LHS Right hand side, left hand side.

Question Number	Scheme	Marks	Notes
1. (a)	$F = \frac{11760}{10}$	B1	Seen or implied
	$R = F - 1200g\sin\alpha$	M1	Motion up the slope. Allow with <i>F</i> . Need all three terms but condone sign errors. Condone trig confusion
	$R = \frac{11760}{10} - 1200g \frac{1}{15}$	A1	Correct equation, correctly substituted.
	R = 390 (392)	A1	Max 3 s.f.
		(4)	
(b)	$F = \frac{50000}{V}$	B1	Seen or implied Could be scored after incorrect work on an energy equation to find <i>F</i>
	$F - 1200g\sin\alpha - 700 = 1200 \ge 1.5$	M1	Equation of motion. Must be using 700. Need all four terms but condone sign errors. Condone trig confusion
		A1	Equation in V or F (and α) with at most one error Their F
	$\frac{50000}{V} - 1200g \frac{1}{15} - 700 = 1200 \text{ x } 1.5$	A1	Correct equation in V
	Solve for V	DM1	Dependent on previous M
	V = 15 (15.2)	A1	Max 3 s.f.
		(6)	
		10

(b)	After impact with wall: 1.5ve	B1	
		(7)	
	$u_P = 8v$ and $u_Q = 4.5v$	A1	Both correct – from cwo Mark final answer – do not ISW
		A1	One correct
	Solve for u_p and u_Q	DM1	Dependent on both previous M marks
	$(12.5v = u_P + u_Q)$	A1ft	Correct unsimplified equation. Signs consistent with their CLM equation
	Impact law: $\frac{1.5v + v}{u_P + u_Q} = \frac{1}{5}$	M1	Must be used right way round. Accept with <i>e</i> not substituted.
	$\left(2.5v = 2u_P - 3v_Q\right)$	A1	Correct unsimplified equation
5(a)	$\text{CLM: } -2mv + 4.5mv = 2mu_P - 3mu_Q$	M1	Need all four terms & dimensionally correct. Condone sign errors.
Question Number	Scheme	Marks	Notes
Oursetiers		Marka	Netes

Solutions that have velocity of P and/or Q in wrong direction before or after the collision score max 5/7 in (a).

Question Number	Scheme	Marks	Notes
6.	W.D against <i>R</i> : 0.025 <i>R</i>	B1	Seen or implied
	W.D. against <i>R</i> = KE Loss + PE Loss	M1	Work-energy equation NB Q asks for work-energy. Need all relevant terms and no extras. Follow their WD Condone 2.5 for 0.025 1.5 for 1.525 is M0 - this is equivalent to leaving out a term in the work- energy equation.
	$0.025R = \frac{1}{2} \times 0.6 \times 22.4^2 + 0.6g \times (1.5 + 0.025)$	A1	At most one error Use of 2.5 for 0.025 is one error
		A1	Correct unsimplified. Follow their WD
	R = 6380 N	A1	Q asks for 3 s.f do not accept 6400
		5	
			Values you might see: KE = $150.528(J)$
			Distance to top $= 25.6(m)$
			Top to ground = $27.1(m)$
			Total distance from top $= 27.125(m)$
			v^2 at ground = 531.16 Change in GPE from top to stop =159.495(J)

NB The Q asks for work-energy. Full marks can be scored for a solution which eventually uses work-energy. A candidate who does additional work with *suvat* equations scores no marks until they form a work-energy equation.

NB If working from the max height to the lowest point then the work-energy equation need not show the zero value for KE. Non-zero KE in this instance is M0 for an additional term.

WD	h	Marks	
0.025 <i>R</i>	1.5+2.5	B1M1A1A0A0	One error 3/5

	Horizontal motion: Use of $s = ut$	M1	Second equation in U and their t e.g. $\frac{U^2}{2g} = U \times \frac{20}{U} - \frac{g}{2} \left(\frac{20}{U}\right)^2$
	$(\rightarrow): 3Ut = 120$	A1ft	Follow their <i>t</i> provided it matches the value of <i>s</i> used.
	$\Rightarrow U = 14$	A1	*Answer Given* Need to see supporting evidence e.g. correct linear equation or solution of quadratic in U^2 giving $U^2 = 20g$
		(5)	
(b)	$v = \sqrt{U^2 + (3U)^2}$	M1	Correct use of Pythagoras' theorem and $U = 14$
	$v = 14\sqrt{10} = 44 \text{ or } 44.3 \text{ m s}^{-1}$	A1	Max 3 s.f.
		(2)	
(c)	$\tan \alpha = \frac{1}{4} \Rightarrow \frac{V}{3U} = \frac{1}{4}$	M1	Use angle to find vertical component
	$\Rightarrow V = \frac{3}{4}U$	A1	$(10.5 (m s^{-1}))$
	Use of $v = u + at$ (\uparrow): $\pm \frac{3}{4}U = U - gt$	M1	Condone without ± Accept complete alternative routes via suvat.
		A1	Correct unsimplified (including \pm)
	$t_1 = \frac{U}{4g} = 0.36s$, $t_2 = \frac{7U}{4g} = 2.5s$	A1	One value correct Accept $\frac{7}{2g}$ and $\frac{49}{2g}$, but not $\frac{5}{14}$ decimals to max 3 s.f.
		A1	Both values correct Apply accuracy penalty only once
		(6)	
		13	

NB a candidate who misreads horizontal and vertical components gets $t = 4.64 \left(\frac{13u}{4g}\right)$ and $t = 3.93 \left(\frac{11u}{4g}\right)$. They can score 11/13. Deduct the first 2 A marks for the misread penalty. www.yesterdaysmathsexam.com
