Mathematical Formulae and Statistical Tables (Blue)

Total Marks

Candidates may use any calculator allowed by the regulations of the Joint Council for Qualifications. Calculators must not have the facility for symbolic algebra manipulation, differentiation and integration, or have retrievable mathematical formulae stored in them.

Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B). Coloured pencils and highlighter pens must not be used.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions and ensure that your answers to parts of questions are clearly labelled.
- Answer the questions in the spaces provided – *there may be more space than you need.*
- You should show sufficient working to make your methods clear. Answers without working may not gain full credit.
- Values from the statistical tables should be quoted in full. When a calculator is used, the answer should be given to an appropriate degree of accuracy.

Information

- The total mark for this paper is 75.
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

Pearson

6. At a men's tennis tournament there are 3, 4 or 5 sets in a match.

Over many years, data collected show that 50% of matches last for exactly 3 sets, 30% of matches last for exactly 4 sets and 20% of matches last for exactly 5 sets.

A random sample of 3 tennis matches is taken. The number of sets in each match is recorded as S_1 , S_2 and S_3 respectively.

The random variable M represents the maximum value of S_1 , S_2 and S_3

- (a) List all the samples where $M \neq 5$ **(2)**
- (b) Find the sampling distribution of M **(4)**
- (c) Write down the mode of S_1 and the mode of M **(1)**

7. The continuous random variable X is uniformly distributed over the interval $[a, b]$

(a) Find an expression, in terms of a and b , for $E(3 - 2X)$ (2)

(b) Find $P(X > \frac{1}{3}b + \frac{2}{3}a)$ (2)

Given that $E(X) = 0$

(c) find an expression, in terms of b only, for $E(3X^2)$ (3)

Given also that the range of X is 18

(d) find $\text{Var}(X)$ (2)
