

1. A random sample of 35 homeowners was taken from each of the villages Greenslax and Penville and their ages were recorded. The results are summarised in the back-to-back stem and leaf diagram below.

Totals	Greenslax		Penville	Totals
(2)	8 7	2	5 5 6 7 8 8 9	(7)
(3)	9 8 7	3	1 1 1 2 3 4 4 5 6 7 9	(11)
(4)	4 4 4 0	4	0 1 2 4 7	(5)
(5)	6 6 5 2 2	5	0 0 5 5 5	(5)
(7)	8 6 5 4 2 1 1	6	2 5 6 6	(4)
(8)	8 6 6 6 4 3 1 1	7	0 5	(2)
(5)	9 8 4 3 2	8		(0)
(1)	4	9	9	(1)

Key: 7 | 3 | 1 means 37 years for Greenslax and 31 years for Penville

Some of the quartiles for these two distributions are given in the table below.

	Greenslax	Penville
Lower quartile, Q_1	a	31
Median, Q_2	64	39
Upper quartile, Q_3	b	55

- (a) Find the value of a and the value of b . (2)

An outlier is a value that falls either

more than $1.5 \times (Q_3 - Q_1)$ above Q_3

or more than $1.5 \times (Q_3 - Q_1)$ below Q_1

- (b) On the graph paper opposite draw a box plot to represent the data from Penville. Show clearly any outliers. (4)

- (c) State the skewness of each distribution. Justify your answers. (3)

Question 1 continued

3. The table shows data on the number of visitors to the UK in a month, v (1000s), and the amount of money they spent, m (£ millions), for each of 8 months.

Number of visitors v (1000s)	2450	2480	2540	2420	2350	2290	2400	2460
Amount of money spent m (£ millions)	1370	1350	1400	1330	1270	1210	1330	1350

You may use

$$S_{vv} = 42587.5 \quad S_{vm} = 31512.5 \quad S_{mm} = 25187.5 \quad \sum v = 19390 \quad \sum m = 10610$$

- (a) Find the product moment correlation coefficient between m and v . (2)
- (b) Give a reason to support fitting a regression model of the form $m = a + bv$ to these data. (1)
- (c) Find the value of b correct to 3 decimal places. (2)
- (d) Find the equation of the regression line of m on v . (2)
- (e) Interpret your value of b . (2)
- (f) Use your answer to part (d) to estimate the amount of money spent when the number of visitors to the UK in a month is 2 500 000 (2)
- (g) Comment on the reliability of your estimate in part (f). Give a reason for your answer. (2)

Question 3 continued

A series of 28 horizontal lines for writing answers.

4. In a factory, three machines, J , K and L , are used to make biscuits.

Machine J makes 25% of the biscuits.

Machine K makes 45% of the biscuits.

The rest of the biscuits are made by machine L .

It is known that 2% of the biscuits made by machine J are broken, 3% of the biscuits made by machine K are broken and 5% of the biscuits made by machine L are broken.

(a) Draw a tree diagram to illustrate all the possible outcomes and associated probabilities. **(2)**

A biscuit is selected at random.

(b) Calculate the probability that the biscuit is made by machine J and is not broken. **(2)**

(c) Calculate the probability that the biscuit is broken. **(2)**

(d) Given that the biscuit is broken, find the probability that it was not made by machine K . **(3)**

Blank lines for writing answers.

6. The times, in seconds, spent in a queue at a supermarket by 85 randomly selected customers, are summarised in the table below.

Time (seconds)	Number of customers, f
0 – 30	2
30 – 60	10
60 – 70	17
70 – 80	25
80 – 100	25
100 – 150	6

A histogram was drawn to represent these data. The 30 – 60 group was represented by a bar of width 1.5 cm and height 1 cm.

- (a) Find the width and the height of the 70 – 80 group. (3)
- (b) Use linear interpolation to estimate the median of this distribution. (2)

Given that x denotes the midpoint of each group in the table and

$$\sum fx = 6460 \quad \sum fx^2 = 529\,400$$

- (c) calculate an estimate for
- (i) the mean,
- (ii) the standard deviation,
- for the above data. (3)

One measure of skewness is given by

$$\text{coefficient of skewness} = \frac{3(\text{mean} - \text{median})}{\text{standard deviation}}$$

- (d) Evaluate this coefficient and comment on the skewness of these data. (3)

Leave blank

Question 6 continued

Grading boxes

Question 7 continued

Lined area for writing the answer to Question 7.

(Total 12 marks)

Q7

--	--

P 4 3 0 1 7 A 0 2 5 2 8

8. For the events A and B ,

$$P(A' \cap B) = 0.22 \text{ and } P(A' \cap B') = 0.18$$

(a) Find $P(A)$. **(1)**

(b) Find $P(A \cup B)$. **(1)**

Given that $P(A|B) = 0.6$

(c) find $P(A \cap B)$. **(3)**

(d) Determine whether or not A and B are independent. **(2)**

Question 8 continued
