Mathematical Formulae and Statistical Tables (Blue)

Total Marks

| |
|--|
| |
|--|

Candidates may use any calculator allowed by the regulations of the Joint Council for Qualifications. Calculators must not have the facility for symbolic algebra manipulation, differentiation and integration, or have retrievable mathematical formulae stored in them.

Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B). Coloured pencils and highlighter pens must not be used.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions and ensure that your answers to parts of questions are clearly labelled.
- Answer the questions in the spaces provided – *there may be more space than you need.*
- You should show sufficient working to make your methods clear. Answers without working may not gain full credit.
- Values from the statistical tables should be quoted in full. When a calculator is used, the answer should be given to an appropriate degree of accuracy.

Information

- The total mark for this paper is 75.
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

PEARSON

1. The discrete random variable X can only take the values 1, 2, 3 and 4
 For these values the cumulative distribution function is defined by

$$F(x) = kx^2 \quad \text{for } x = 1, 2, 3, 4$$

where k is a constant.

(a) Find the value of k . **(2)**

(b) Find the probability distribution of X . **(2)**

2. Paul believes there is a relationship between the value and the floor size of a house. He takes a random sample of 20 houses and records the value, £ v , and the floor size, s m²

The data were coded using $x = \frac{s - 50}{10}$ and $y = \frac{v}{100\,000}$ and the following statistics obtained.

$$\sum x = 441.5, \quad \sum y = 59.8, \quad \sum x^2 = 11\,261.25, \quad \sum y^2 = 196.66, \quad \sum xy = 1474.1$$

(a) Find the value of S_{xy} and the value of S_{xx} (3)

(b) Find the equation of the least squares regression line of y on x in the form $y = a + bx$ (3)

The least squares regression line of v on s is $v = c + ds$

(c) Show that $d = 1020$ to 3 significant figures and find the value of c (3)

(d) Estimate the value of a house of floor size 130 m² (2)

(e) Interpret the value d (1)

Paul wants to increase the value of his house. He decides to add an extension to increase the floor size by 31 m²

(f) Estimate the increase in the value of Paul's house after adding the extension. (1)

Question 2 continued

Lined writing area with 30 horizontal lines.

3. A company employs 90 administrators. The length of time that they have been employed by the company and their gender are summarised in the table below.

| Length of time employed, x years | Female | Male |
|------------------------------------|--------|------|
| $x < 4$ | 9 | 16 |
| $4 \leq x < 10$ | 14 | 20 |
| $10 \leq x$ | 7 | 24 |

One of the 90 administrators is selected at random.

- (a) Find the probability that the administrator is female. **(1)**

- (b) Given that the administrator has been employed by the company for less than 4 years, find the probability that this administrator is male. **(2)**

- (c) Given that the administrator has been employed by the company for less than 10 years, find the probability that this administrator is male. **(2)**

- (d) State, with a reason, whether or not the event ‘selecting a male’ is independent of the event ‘selecting an administrator who has been employed by the company for less than 4 years’. **(3)**

6. The random variable X has a discrete uniform distribution and takes the values 1, 2, 3, 4

Find

(a) $F(3)$, where $F(x)$ is the cumulative distribution function of X , (1)

(b) $E(X)$. (1)

(c) Show that $\text{Var}(X) = \frac{5}{4}$ (3)

The random variable Y has a discrete uniform distribution and takes the values

$$3, 3 + k, 3 + 2k, 3 + 3k$$

where k is a constant.

(d) Write down $P(Y = y)$ for $y = 3, 3 + k, 3 + 2k, 3 + 3k$ (1)

The relationship between X and Y may be written in the form $Y = kX + c$ where c is a constant.

(e) Find $\text{Var}(Y)$ in terms of k . (2)

(f) Express c in terms of k . (1)

7. A doctor is investigating the correlation between blood protein, p , and body mass index, b .

He takes a random sample of 8 patients and the data are shown in the table below.

| Patient | A | B | C | D | E | F | G | H |
|---------|-----|-----|-----|-----|-----|-----|-----|-----|
| b | 32 | 36 | 40 | 44 | 42 | 21 | 27 | 37 |
| p | 18 | 21 | 31 | 39 | 21 | 12 | 19 | 70 |

(a) Draw a scatter diagram of these data on the axes provided.

(2)

The doctor decides to leave out patient H from his calculations.

(b) Give a reason for the doctor's decision.

(1)

For the 7 patients A, B, C, D, E, F and G ,

$$S_{bp} = 369, \quad S_{pp} = 490 \quad \text{and} \quad S_{bb} = 423 \frac{5}{7}$$

(c) Find the product moment correlation coefficient, r , for these 7 patients.

(2)

(d) Without any further calculations, state how r would differ from your answer in part (c) if it was calculated for all 8 patients.

(1)

8.

Figure 1

The histogram in Figure 1 summarises the times, in minutes, that 200 people spent shopping in a supermarket.

- (a) Give a reason to justify the use of a histogram to represent these data. (1)

Given that 40 people spent between 11 and 21 minutes shopping in the supermarket, estimate

- (b) the number of people that spent between 18 and 25 minutes shopping in the supermarket, (3)

- (c) the median time spent shopping in the supermarket by these 200 people. (2)

The mid-point of each bar is represented by x and the corresponding frequency by f .

- (d) Show that $\sum fx = 6390$ (2)

Leave blank

Question 8 continued

Lined area for writing the answer to Question 8.
