Figure 1

A tank in the shape of a cuboid is being filled with water.

The base of the tank measures 20 m by 10 m and the height of the tank is 5 m, as shown in Figure 1.

At time  $t$  minutes after water started flowing into the tank the height of the water was  $h$  m and the volume of water in the tank was  $V$  m<sup>3</sup>

In a model of this situation

- the sides of the tank have negligible thickness
- the rate of change of  $V$  is inversely proportional to the square root of  $h$

(a) Show that

$$\frac{dh}{dt} = \frac{\lambda}{\sqrt{h}}$$

where  $\lambda$  is a constant.

(3)

Given that

- initially the height of the water in the tank was 1.44 m
- exactly 8 minutes after water started flowing into the tank the height of the water was 3.24 m

(b) use the model to find an equation linking  $h$  with  $t$ , giving your answer in the form

$$h^{\frac{3}{2}} = At + B$$

where  $A$  and  $B$  are constants to be found.

(5)

(c) Hence find the time taken, from when water started flowing into the tank, for the tank to be completely full.

The number of subscribers to two different music streaming companies is being monitored.

The number of subscribers,  $N_A$ , in thousands, to **company A** is modelled by the equation

$$N_A = |t - 3| + 4 \quad t \geq 0$$

where  $t$  is the time in years since monitoring began.

The number of subscribers,  $N_B$ , in thousands, to **company B** is modelled by the equation

$$N_B = 8 - |2t - 6| \quad t \geq 0$$

where  $t$  is the time in years since monitoring began.

Figure 2 shows a sketch of the graph of  $N_A$  and the graph of  $N_B$  over a 5-year period.

**Use the equations of the models to answer parts (a), (b), (c) and (d).**

- (a) Find the initial difference between the number of subscribers to **company A** and the number of subscribers to **company B**.

(2)

When  $t = T$  **company A** reduced its subscription prices and the number of subscribers increased.

- (b) Suggest a value for  $T$ , giving a reason for your answer.

(2)

- (c) Find the range of values of  $t$  for which  $N_A > N_B$  giving your answer in set notation.

(5)

- (d) State a limitation of the model used for **company B**.

(4)

- (c) Find, using algebraic integration, the exact value of
