Notes:

(a)

M1: Attempts $f(3) =$ and $f(4) =$ where $f(x) = \pm(2\ln(8-x) - x)$ or alternatively **compares** $2\ln 5$ to 3 and $2\ln 4$ to 4. This is not routine and cannot be scored by substituting 3 and 4 in both functions

A1: Both values (calculations) correct to at least 1 sf with correct explanation and conclusion. (See underlined statements)

When comparing terms, allow reasons to be $2\ln 8 = 3.21 > 3$, $2\ln 4 = 2.77 < 4$ or similar

(b)

M1: For an attempt at using a cobweb diagram. Look for 5 or more correct straight lines. It may not start at 4 but it must show an understanding of the method. **If there is no graph then it is M0 A0**

A1: For a correct attempt starting at 4 and deducing that the iteration **can be used** as the iterations **converge to the root**. You must statement that it can be used with a suitable reason. Suitable reasons could be "it spirals inwards", "it gets closer to the root", "it converges"

M1: Choose suitable interval for x , e.g. $[-3.175, -3.165]$ and at least one attempt to evaluate $f(x)$. Evidence would be the values embedded within an expression or one value correct. A minority of candidates may choose a tighter range which should include -3.1698 (alpha to 4dp). This would be acceptable for both marks, provided the conditions for the A mark are met. Some candidates may use an adapted $f(x) = 0$, for example

$g(x) = x - \sqrt[3]{(5x - 16)}$ This is also acceptable even if it is called f , but you must see it defined. For your information $g(-3.175) = -0.004$, $g(-3.165) = (+)0.004$ If the candidate states an f (without defining it) it must be assumed to be $f(x) = x^3 - 5x + 16$

A1: needs (i) both evaluations correct to 1 sf, (either rounded or truncated)

(ii) sign change stated (>0 , <0 acceptable as would a negative product) and

(iii) some form of conclusion which may be $\Rightarrow \alpha = -3.17$ or "so result shown" or qed or tick or equivalent

B1: $x = \sqrt{\frac{3}{2}}$ or exact equivalent and no others **inside** the range. Ignore any solution outside the range so allow

e.g. $x = \pm \sqrt{\frac{3}{2}} \cdot \sqrt{\frac{3}{2}}$ seen unless seen in an incorrect statement e.g. $x^2 = \sqrt{\frac{3}{2}}$.

	Note that going straight from $x^5 + x^3 = 12x^2 + 8$ to $x^3 = \frac{12x^2 + 8}{(x^2 + 1)}$ is acceptable for the first 2 marks but the final mark should be withheld for not explicitly showing the factorisation of the lhs

M1: Attempts to write equation in the form $x^5 \pm x^3 = 12x^2 \pm 8$ or $x^3(x^2 \pm 1) = 12x^2 \pm 8$.A1: Intermediate line of $x^3 = \frac{12x^2 + 8}{(x^2 + 1)}$ seenA1*: cso with the factorisation of the lhs seen explicitly and a statement at the start that $f(x) = 0$ or $x^5 + x^3 - 12x^2 - 8 = 0$ or e.g. $x^3(x^2 + 1) - 4(3x^2 + 2) = 0$

Do not be overly concerned about the cube root encompassing the whole fraction but do not allow if it is

only unambiguously the numerator that has the cube root e.g. $\Rightarrow x = \frac{\sqrt[3]{4(3x^2 + 2)}}{(x^2 + 1)}$ **Beware of other algebraic methods of establishing the result in (a) – if in doubt send to review.****Alternative for part (a):**
