Mathematical Formulae and Statistical Tables (Blue)

Total Marks

--

Candidates may use any calculator allowed by the regulations of the Joint Council for Qualifications. Calculators must not have the facility for symbolic algebra manipulation, differentiation and integration, or have retrievable mathematical formulae stored in them.

Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B). Coloured pencils and highlighter pens must not be used.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions and ensure that your answers to parts of questions are clearly labelled.
- Answer the questions in the spaces provided – *there may be more space than you need.*
- You should show sufficient working to make your methods clear. Answers without working may not gain full credit.
- Values from the statistical tables should be quoted in full. When a calculator is used, the answer should be given to an appropriate degree of accuracy.

Information

- The total mark for this paper is 75.
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

1. Ralph records the weights, in grams, of 100 tomatoes. This information is displayed in the histogram below.

Given that 5 of the tomatoes have a weight between 2 and 3 grams,

- (a) find the number of tomatoes with a weight between 0 and 2 grams. (2)

One of the tomatoes is selected at random.

- (b) Find the probability that it weighs more than 3 grams. (2)

- (c) Estimate the proportion of the tomatoes with a weight greater than 6.25 grams. (2)

- (d) Using your answer to part (c), explain whether or not the median is greater than 6.25 grams. (1)

Given that the mean weight of these tomatoes is 6.25 grams and using your answer to part (d),

- (e) describe the skewness of the distribution of the weights of these tomatoes. Give a reason for your answer. (1)

Two of these 100 tomatoes are selected at random.

- (f) Estimate the probability that both tomatoes weigh within 0.75 grams of the mean. (4)

2. An integer is selected at random from the integers 1 to 50 inclusive.

A is the event that the integer selected is prime.

B is the event that the integer selected ends in a 3

C is the event that the integer selected is greater than 20

The Venn diagram shows the number of integers in each region for the events A , B and C

- (a) Describe in words the event $(A \cap B)$ (1)
- (b) Write down the probability that the integer selected is prime. (1)
- (c) Find $P([A \cup B \cup C]')$ (1)

Given that the integer selected is greater than 20

- (d) find the probability that it is prime. (2)

Using your answers to (b) and (d),

- (e) state, with a reason, whether or not the events A and C are statistically independent. (2)

Given that the integer selected is greater than 20 and prime,

- (f) find the probability that it ends in a 3 (2)

Leave blank

- 6. In a factory, a machine is used to fill bags of rice. The weights of bags of rice are modelled using a normal distribution with mean 250g.

Only 1% of the bags of rice weigh more than 256g.

- (a) Write down the percentage of bags of rice with weights between 244g and 256g. **(1)**

- (b) Find the standard deviation of the weights of the bags of rice. **(3)**

An inspection consists of selecting a bag of rice at random and checking if its weight is within 4g of the mean. If the weight is more than 4g away from the mean, then a second bag of rice is selected at random and checked. If the weight of each of the 2 bags of rice is more than 4g away from the mean, then the machine is shut down.

- (c) Find the probability that the machine is shut down following an inspection. **(4)**
